FWS Fire Management Handbook

The FWS Fire Management Handbook is a program reference guide that documents the standards for operational procedures and practices for fire management activities in the U. S. Fish and Wildlife Service. These standards and practices are based on current Service, Departmental, and Interagency policy, and are intended to provide program guidance to ensure safe, efficient, and effective wildland fire operations.

The Fire Management Handbook is formatted similarly to the Redbook which should be familiar to all involved in fire management. To minimize duplication, the Fire Management Handbook references, instead of restating, supplemental guidance in the Redbook and other policy and guidance documents.

Individual chapter links are portable document format files (pdf) and requires the [Acrobat Reader](#) plug-in. A **complete portable document format version of the Fire Management Handbook** is available for viewing on line, downloading for viewing off line and printing. Each chapter can also be viewed on line, printed, or downloaded and saved for viewing off line using the Acrobat Reader save and print functions.
